

Introduction to Chemistry

AI Tutor - Chemistry - Lesson 1

What is Chemistry?

Chemistry is the study of matter - what it is made of, how it behaves, and how it changes when it interacts with other matter. It bridges physics and biology, explaining everything from cooking to medicine to materials science.

States of Matter

- **Solid** - fixed shape and volume, particles tightly packed.
- **Liquid** - fixed volume but takes the shape of its container.
- **Gas** - no fixed shape or volume, particles spread far apart.

Physical vs Chemical Change

A physical change (like ice melting) alters appearance without changing the substance itself. A chemical change (like burning wood) creates new substances with different properties.
