

Introduction to Flutter

AI Tutor - Flutter - Lesson 1

What is Flutter?

Flutter is an open-source UI framework created by Google for building natively compiled applications for mobile, web, and desktop from a single codebase, using the Dart programming language.

Why Developers Use Flutter

- **Single codebase** - write once, run on Android, iOS, web, and desktop.
- **Hot reload** - see code changes instantly without restarting the app.
- **Widget-based UI** - every visual element is a composable widget.
- **Great performance** - compiles to native machine code.

Your First Widget

In Flutter, everything is a widget - buttons, text, layout containers, even the app itself. A simple widget looks like: `Text('Hello, Flutter!')`
